Dear R Squared AI Team,

I came across the AI Technical Facilitator role and wanted to reach out. I've spent the past year building production AI systems: agents, tool use pipelines, and full stack applications on top of Anthropic and OpenAI APIs. This is the work I'm doing right now, so the role felt like a natural fit.

My background is as a serial founder and full stack engineer. I co-founded Blaze, a YC S24 stablecoin payments platform for digital nomads, where I architected the entire system using Next.js, NestJS, Prisma, PostgreSQL, and Redis. Before that I built Seasons (raised \$4.3M, hired a team of 7 engineers from scratch) and Often (500K downloads, number one in the App Store for 72 hours). I was also the founding engineer at YieldMo, where I grew the frontend team from 1 to 5, and spent two years at Artsy as a Tech Lead building real time auction systems at scale.

On the AI side, I have real opinions about agent architecture: when tool calling makes sense versus chaining, how to structure memory and context, and the tradeoffs between model providers. Day to day I work heavily with Claude Code and have used Codex as well. I've also experimented with a range of other tools and models as the space has been moving fast. I'm comfortable across the full stack you described: React and Next.js on the front end, Python and FastAPI on the back end, and the AI layer in between. I treat prompt engineering as a core part of the work, not an afterthought, and have shipped agentic workflows that connect to external services and actually run in production.

What stands out to me about R Squared AI is the forward deployed model. As a founder, I operated the same way: embedded with users, owning outcomes, not advising from a distance. The emphasis on shipping working systems over pilots is exactly how I think about building. The right answer was always to get something real in front of people quickly and then improve from there.

I'd love to chat more. Happy to share GitHub, working examples, or anything else that would be useful.

Best,

Luc Succes
